

Internship Grade

My Data Science Internship Journey

A simple look at what I studied, what I built, and what I learned

Aditi Pandey

IILM University, Greater Noida

8-Week Data Science Master Virtual Internship | April – June 2026

Supported by SIEMENS • AICTE • National Internship Portal • EduSkills

What This Internship Was About

In plain words — before we get into the details

8

8 weeks long

A structured virtual internship, done from home, at my own pace alongside my studies.

S

Backed by big names

Run through the AICTE National Internship Portal with EduSkills, and supported by Siemens.

D

Focused on Data Science

The programme is called the 'Data Science Master Virtual Internship' — all about working with data.

U

Recognised by my university

Completed as part of my learning at IILM University, Greater Noida, between April and June 2026.

What I Studied

The core building blocks of the Data Science curriculum

1

Python Programming

Learning to write code that can read, clean and work with data.

2

Statistics & Probability

The math behind spotting patterns and making sense of numbers.

3

Data Handling with SQL

Storing, sorting and pulling information out of databases.

4

Data Visualization

Turning raw numbers into charts and graphs anyone can understand.

5

Machine Learning Basics

Teaching a computer to notice patterns and make predictions.

6

Real Industry Case Studies

Applying all of the above to problems inspired by Siemens' work.

Skills & Tools I Picked Up

Not just theory — things I can actually use

HOW I THINK NOW

- Breaking a big problem into small, solvable steps
- Reading data carefully before jumping to conclusions
- Explaining technical findings in simple language
- Working independently and managing my own timeline

TOOLS I USED

Python

Jupyter Notebook

SQL

Excel

Power BI / Tableau

Pandas & NumPy

What This Internship Taught Me

A few honest takeaways, beyond the syllabus

1

Data tells a story, if you ask the right questions

2

Consistency over 8 weeks matters more than short bursts of effort

3

Real industry problems are messier — and more interesting — than textbook ones

4

I can learn a technical skill on my own, step by step, and finish what I start

Outstanding Grade

Certificate of Virtual Internship

Data Science Master Virtual Internship

*This 8-week journey gave me hands-on exposure to real data, real tools,
and a small taste of what working in Data Science actually feels like.*
